[Broken Places - Screening & Discussion](#)

## **BROKEN PLACES ~ SCREENING & DISCUSSION**

**(CE pending)**

*Participants will participate in viewing the documentary and have discussion throughout the film.*

Discussion points and learning objectives:

- The dynamics of Adverse Childhood Experiences
- How untreated ACEs can negatively impact education, relationships, family life, job opportunities etc.
- Explore why some children are severely damaged by early adversity while others can thrive.
- Learn from nationally renowned experts to help better understand the devastating impact of childhood adversity as well as the inspiring characteristics of resilience.
- Learn how epigenetics relates to child development.
- Inter-generational abuse

BROKEN PLACES documentary explores why some children are severely damaged by early adversity while others can thrive.

To help answer this question, we updated a few of the stories of children growing up in difficult circumstances that we filmed decades ago. It turns out that some of these children were so scarred by abuse and neglect that they are now in mental institutions, correctional facilities, or drug rehabilitation centers. A few died prematurely. However, there are others who managed to overcome comparable childhood stress and are now healthy, self-sufficient adults. Viewers are given a unique time-lapse perspective, witnessing how a few of these troubled children evolved into the adults they are today.

By revisiting some of the abused and neglected children we profiled decades ago, we're able to dramatically illustrate how early trauma shaped their lives as adults. BROKEN PLACES interweaves these longitudinal narratives with commentary from a few nationally renowned experts to help viewers better understand the devastating impact of childhood adversity as well as the inspiring characteristics of resilience.
